App Name: VIDA-VITAL Beta
Developer: Ronald Jonas
Platform: iOS
Date: July 4, 2025
Purpose: App Store Disclosure Statement for Review

App Store Disclosure for Apple Review

App Purpose:

VIDA-VITAL Even if detecting vascular anomalies frequently linked to breast cancer and other breast infections is a **health awareness and educational tool** designed to encourage early consultation with healthcare professionals regarding breast health. The app allows users to capture and view images of their breasts using their device's camera. These images can be enhanced using a neuromimetic neural network and visual filters to improve the visibility of skin surface features, and just 6 cm under the skin, using the near-infrared component present in pictures.

Important Disclaimer:

VIDA-VITAL Beta is **not a medical device** and does **not provide a medical diagnosis**. It is not a substitute for professional medical advice, diagnosis, or treatment. The app analyzes images to detect medical conditions associated with breast cancer and other breast diseases. **But all output is for informational and awareness purposes only**.

User Guidance:

Users are explicitly instructed:

- To use the app for awareness and self-monitoring only.
- To consult a **licensed healthcare provider** regarding any concerns.
- No medical conclusions should be drawn from the app's use or any images processed by the app.

Data Usage and Privacy:

- The app does **not collect, store, or transmit** any personal images or health-related data.
- All image processing is done **locally on the user's device**.
- No external servers are contacted, and no data leaves the device.
- The app requires permission only for camera or photo library access to function.
- Users remain in full control of their data and may delete all images from their device at any time.

Target Audience:

The app is intended for women **(40+)** or those having familiar history of cancer (18+)seeking to become more aware of their breast health. It is not designed for use by minors or to replace clinical screening or diagnostic procedures.

Limitations of Use:

- VIDA-VITAL Beta does **not diagnose**, **treat**, or **monitor** any disease or condition. But do an early recommendation to visit a specialist, in case of anomalies detected by the app, which helps to save lives in case of early breast cancer detection.
- It does not use artificial intelligence or any automated image classification; it uses neuro-mimetic neural networks.
- It does not generate risk scores, warnings, or alerts. Just recommend visiting a specialist, putting more or less emphasis on the recommendation.
- The app applies neuro-mimetic neural networks and visual filters (contrast, brightness adjustments) to help the user **see features more clearly**, without interpretation.

Clear In-App Notices:

Throughout the app (splash screen, settings, and help screens), the following messages are displayed:

⚠️ This app is not intended to be a diagnostic tool. It is intended to either less or more strongly encourage medical consultation and early health awareness. Consult your doctor for any health-related concerns.

Legal and Regulatory Compliance:

- The app includes a clear **Terms of Use**, **Privacy Policy**, and **Important Notice**, accessible from the app's main menu.
- Users must agree to the terms before using the app.
- The app is not marketed or distributed as a medical product and does not fall under FDA or EU MDR classification as a medical device.
